Load Balancers and Robust Backups

CENTRI Load Balancers for Emails

CENTRI Load Balancer Architecture

Enhanced MTA Load Balance – We have enhanced our email engine for better load balancing mechanism of out bound emails. By this enhance, it will auto intelligently select suitable MTA from available MTA pool based on the calculation of current and upcoming email loads of a specific MTA traffic.

Increased IP Pool Capacity – To increase the hourly limitation of out bound emails and proper load balancing intelligence we are increased the IP Pool Size. Right now we have at least 3 IPs for each MTA.

Revised IP & Domain Monitoring Program – We are using set of tools and portals for constant monitoring of our MTA's IP & Domain reputation. Currently we are monitoring this twice in a day. In future we have plan upgrade this to automatic monitoring system.

Daily MTA Switching – Based on our daily monitoring report of MTAs IP & Domain we switch ON/OFF IPs & Domains to ensure better inbox reachability.

Seamless Integration

[CENTRI™ offers Easy API Integration & Speed of Set Up with OOTB Connectivity & Reliability](#)

Intelligent Workflows

Enhanced Support for your Business Needs comes through the [FlexiFlow™ \(Intelligent Workflows\) Controls](#)

Flexible MAGIC

Robust Admin Capabilities in ZINFI MAGIC help you to [move at Faster Enablement Speeds](#)

SFDC FIRE

Instantly Connect to your SFDC Instance with the [“DIY” ZINFI FIRE Installer – and get Synced Quicker](#)

ZINFI's Centralized Interconnect (CENTRI™) integration engine is the core driver for the processing of workflows and approval flows created with UCM's dynamic workflow engine, FlexiFlow™.

CENTRI provides a cross-platform workflow server and a cross-platform back end for managing, designing and tracking workflows with ease and flexibility.

CENTRI is based on modern architectures providing orchestration of stateless and internal/external functions, such as APIs, SSO and OAuth.

Utilizing these functions or services, CENTRI provides a way to implement complex end-to-end business capabilities, which often stretch across multiple platforms and web services.

With CENTRI, you gain access to our updated extensive library of marketing APIs, as well as popular databases, cloud storage platforms and big data environments. Simply select your platform connector to automate your data integration directly, updating at the interval of your choice. Our updated APIs cover the full spectrum of the mar-tech and ad-tech ecosystem so you can connect to just about any data source—marketing automation systems, ERPs, SSO, eSign, data feeds, CRMs, email and more—all in one place, quickly and easily.

Using ZINFI's FlexiFlow™, you can create sophisticated, targeted flows without the headaches, and give every contact in your database the attention they deserve.

The FlexiFlow visual editor has been updated to make it easy to envision workflows in real time—while building simple or complex follow-up workflows.

Use advanced segmentation logic to determine exactly who gets enrolled in your organization's workflows and when.

The FlexiFlow engine automates the regular and repetitive tasks of a business process, allowing your organization to define workflows without any code changes, thus saving both time and money.

The FlexiFlow engine helps you process and automate external tasks by letting you configure and connect to external platforms through CENTRI to manage such external processes.

Portal Administration Management

Adaptive SaaS

ZINFI's Unified Channel Management™ Platform allows you to architect your own channel vision using our **MAGIC** Admin tools – enabling you to move at a **FAST** rate of Management & Enablement

FULL CONTROL

YOU have complete control in deciding what you want to do yourself, and what you want to outsource to ZINFI or to your 3rd party agencies, etc. YOU control what works for YOU!

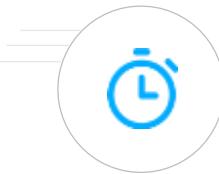

AFFORDABLE OUTSOURCING

If you want to outsource to ZINFI or to your 3rd party providers the overall Total Cost of Ownership (TCO) would be lower than any one of our competitors due to our MAGIC DIY tools

SIMPLE USAGE

Extremely logical & super easy to use admin tools, allowing in-house or agency-assisted portal control. This eliminates users going back and forth to ZINFI for support and lowers cost

TIME SAVING

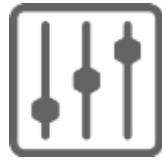

Flexible MAGIC admin capabilities allows you or your agency to move to at lightning speed – with little dependency on ZINFI support so you can get it done **FAST** >>>

UCM's latest offering, the SFDC Fire Installer allows you to instantly connect with Salesforce to automate your work and find productivity super-powers.

- **Easy to Install & Connect** – ZINFI UCM would need fewer permissions on the standard SFDC object. Installation of our package in the Salesforce environment from the customer perspective, would be way easy and lightning fast.
- **More Configurable by Salesforce Admin** – ZINFI UCM will give added FIRE-power to the Salesforce Administrator to add sync criteria, etc. from Salesforce admin console and they do not need to do those in ZINFI UCM or no need to wait for ZINFI to configure those.
- **Quick FIRE Install in the Live Demo** – The package can be installed quickly during the demo with the customer salesforce organization to show the configuration and sync process at lightning speeds.
- **Dashboard Reports in Salesforce** – The new architecture would be capable to provide native dashboard reports in Salesforce based on dynamically synchronized data from ZINFI UCM, so the customer can see the basic reports from Salesforce and they do not need to login to ZINFI UCM for these reports. Please note that we are trying to provide as many reports as possible in this release but would continue to release more reports in the upcoming releases.

Intuitive Control

Extremely logical and easy-to-use [Admin Tools](#) complete with Guided Support Help & Knowledge Base

Enhanced UX

[Exceptional User Experience to provide](#) Small-Step Execution & Easy Navigation through All Activities

FlexiTouch™

Configure & Execute [Multi-Touch Campaigns](#) with Drag-and-Drop simplicity & visualization
